

For Healthcare Professionals

Vaccine Virtual Days

29–30 June, 2020

Register Now: Don't miss your chance to interact with renowned medical experts and peers from around the world

Register now 

Due to COVID-19, healthcare professionals have missed out on critical opportunities to connect with experts and peers, whilst facing a global crisis that requires collaboration and knowledge sharing like never before. This is why an **independent scientific committee of leading experts*** has designed an interactive 2-day programme to bring healthcare professionals together, on a virtual platform, hosted by GSK.

Vaccine Virtual Days, 29-30 June: your opportunity to join discussions on vaccinology, infectious diseases and much more.

Topics that will be covered, by more than 40 international experts, include:

- Vaccine development (including SARS-CoV-2 vaccines)
- Assessing vaccine safety and confidence in the COVID-19 era
- Non-specific vaccine effects
- Antimicrobial resistance
- Life-course immunisation (paediatric, maternal and older adult)
- Respiratory pathogens (e.g. biology of SARS-CoV-2 and clinical implications)

Register to take the opportunity to learn from international experts like **Stanley Plotkin** about vaccine development; or about SARS-CoV-2 biology from **Malik Peiris**, who was the first to isolate the coronavirus, SARS CoV-1, in 2003.

This virtual event will take place June 29–30, 2020. Visit the registration page to discover the full agenda of topics and speakers – both live and on-demand – and register, for free, today!
